EDUCATION

SVKM's Dwarkadas J. Sanghvi College of Engineering

Bachelor of Technology in Computer Engineering, Honors in Data Science (CGPA: 8.67)

Mumbai, India

2023 – 2027

EXPERIENCE

App Developer

Apr 2026 – Present

Triponovaa | dev.triponovaa.com

- Building a cross-platform travel booking application with **30+** screens covering hotel, flight, and travel insurance workflows.
- Integrated Travelport, TBO, and ZakPay APIs through reusable service layers, reducing duplicate networking logic across multiple booking modules.
- Improved application responsiveness by caching frequently accessed API responses with Hive, preloading static reference datasets, and implementing skeleton loading states for smoother user interactions.
- Developed scalable Flutter architecture using reusable widgets and modular service layers, enabling faster feature delivery and easier maintenance across the application.

App Developer

Mar 2025 – Apr 2026

SVKM EduConnect | educonnect.svkm.ac.in

- Built and shipped a cross-platform school communication app with **500+** downloads on Play Store and App Store, serving **40+** teacher profiles with expansion ongoing.
- Replaced fragmented tools (WhatsApp groups, paper circulars, manual attendance) with a unified platform featuring **3** chat modes, announcements, leave requests, and appointment booking.
- Implemented real-time messaging via WebSockets and FCM push notifications, interactive timetable, and attendance tracking; collaborating directly with stakeholders.

Flutter Developer Intern

Dec 2024 – Mar 2025

Quickyearning Pvt. Ltd. | quickyearning.com

- Developed and delivered DiamondRock, a cross-platform stock market application featuring real-time market data across **12** screens, successfully deployed to Play Store internal beta testing.

PROJECTS

Stock Research Assistant | *FastAPI, LangGraph, PostgreSQL, Python, Docker, LLMs*

Jul 2026

- Engineered a multi-agent financial research system using LangGraph to coordinate specialized agents for market analysis, financial statements, news synthesis, and investment report generation.
- Built scalable FastAPI services integrating ,verification guardrails, structured market data, to deliver context-aware responses with source attribution.
- Implemented persistent workflows, conversation memory, tool orchestration, and asynchronous background processing, enabling automated end-to-end equity research pipelines.

CricManager | *cricmanagernow.web.app* | *Spring Boot, Flutter, PostgreSQL, Docker, Python*

Jun 2026

- Built a Python ML pipeline using gradient boosting and calibrated logistic regression to derive ball-by-ball Expected Runs and Win Probability analytics from historical cricket data.
- Engineered a Spring Boot REST API with PostgreSQL, containerized via Docker, featuring a match simulator that models scores, wickets, and full tournament fixtures.
- Deployed a Flutter for Web frontend via Firebase with an interactive draft room, lineup constructor, and season tournament simulation dashboard.

JackDSQL | *jackdsl.web.app* | *Spring Boot, PostgreSQL, Flutter, RabbitMQ, Redis, Docker*

May 2026

- Designed a dual-database architecture isolating the SQL sandbox from the main DB, ensuring atomicity across **270** SQL challenges and **29** foundation questions.
- Implemented role-based security, automated cleanup, and query safety mechanisms; containerized all services via Docker Compose for consistent deployment.
- Built a Flutter SQL editor with result visualization and AI-powered hint generation (Groq/Gemini) for real-time error feedback and learning support.

TECHNICAL SKILLS

Languages: Java, Python, Dart

AI & ML: LangGraph, LangChain, LLMs, scikit-learn

Backend: Spring Boot, FastAPI, REST APIs, RabbitMQ, WebSockets

Databases: PostgreSQL, MongoDB, MySQL, Redis

Mobile & Web: Flutter, BLoC, Provider, Dio

DevOps & Tools: Docker, Firebase, Git, GitHub, Postman
